

TECHNICAL INFORMATION

SEGAWATER SK-1200

Cooling Tower Water Treatment Chemical

It is a water treatment chemical developed to control water quality in cooling towers, prevent scale and mineral deposits, and support efficient system operation.

Product Advantages

- Controls scale and mineral deposits.
- Helps prevent the precipitation of hardness ions in the water.
- Supports keeping heat transfer surfaces clean.
- Contributes to maintaining cooling system efficiency.

Özellikler

Physical Appearance	Yellowish transparent liquid
pH	12.0–14.0
Density	1.00– 1.15
Solubility	Easily soluble in water

Application Area

Used in industrial cooling towers and recirculating cooling water systems.

Application and Dosage

The product should be applied in a controlled manner using suitable dosing equipment for the cooling water system.

The dosage should be determined according to water hardness, conductivity, pH, cycles of concentration, and system operating conditions.

Precautions

Storage Stability: 12 months when stored in its original packaging at temperatures between 0–40°C.

Most of the dyes, pigments, and chemicals are patented by Sözal Ltd. or its affiliated companies in various industrialized countries. The information and recommendations provided herein have been prepared with great care; however, they may not cover every possible situation. This information and these recommendations are intended as non-binding guidelines and must be adapted to the applicable conditions. No responsibility can be accepted for fields of application and methods not specified herein. Information required to be disclosed and the necessary protective measures can be obtained from the product's Safety Data Sheet (SDS).
